- Currently in my training phase I've been actively engaging in attending lectures and training sessions to acquire knowledge of various technologies.
- Studying best practices and industry standards related to programming and API testing.
- Gaining a solid foundation in the theoretical aspects of software development and testing
- Collaborated across teams to generate creative content ideas, troubleshoot errors, strengthen teamwork and communication skills.
- Technical skills learned: Python(advanced), Postman, Unit testing, APIs, SQL**

## Projects

### Random GIF generator / HTML, Tailwind CSS, JS, React JS / Link

2

- Created a fun and interactive platform that allows the user to generate random GIFs based on their search input. A custom hook is made that enables seamless interaction, allowing user to fetch and view wide range of GIF's.

### GitHub Profile Tracker / HTML, CSS, JavaScript / Link

1

- A powerful app designed to provide developers with an easy way to search for GitHub profiles. A simple UI is maintained, resulting in a seamless user experience.
- Provides developers with valuable information like location, repositories, followers and other information.

### Weather App / HTML, CSS, JavaScript / Link

1

- A website to retrieve the latest weather data from reliable sources and display it on the screen.
- The weather is presented in an easy-to-read format which includes wind speed, humidity and cloud information. This application works on the basis of the user's current location, so to use this the user needs to enable it's location and with the help of API the application displays the weather data.
